

### Introduction to REDCap

Parya Zareie, MS University of Tennessee REDCap Administrator Informatics Architect

## Learning Objectives

- 1. Understand what REDCap can do as a Research Data Collection Tool.
- 2. Be familiar with the REDCap Interface and where the main functions are.
- 3. Understand the overall process of building a REDCap Project.
- 4. Be able to build a Project with a simple Data Collection Instrument to capture data.
- 5. Be able to import into and export data from the Project

#### What is REDCap?

- REDCap is a web-based software application for the electronic collection and management of research data.
- Originally designed at Vanderbilt University, it is now used at more than 2000 institutions worldwide, including the University of Tennessee.
- REDCap's user-friendly and menu-driven processes for rapidly developing databases do not require in-depth IT knowledge or constant IT Tech Support to use.

# **Common Misconceptions about REDCap**

- REDCap is designed for Collecting Information.
- It is:
- NOT a Data Storage system.
- NOT a Statistical / Analytical tool.
- **NOT** a Workflow Engine / Project Management tool.
- **NOT** a Data Anonymization tool.
- NOT a Silver Bullet that can solve all your research data collection problems.

## **Demo Content**

- 1. Create/develop a project
- 2. Data collection
- 3. Data export
- 4. Main features

#### **Questions or Comments**
